Solution Update

May 2021

the two most important healthcare parking components

Make it easy to manage

Any healthcare estate is a busy, high pressure environment. The last thing the operations team need is a disparate system unable to integrate. Every parking solution needs to be an integrated total parking solution with central management and comprehensive reporting. Anything less adds needless pressure to the team and takes them away from core operations. Take away the noise.

Make it easy to park

Visiting a hospital can be a stressful event. Everything must be done to reduce patient and family stress before they even walk into the building – starting in the carpark. Making the journey from parking a vehicle into the building as short and simple as possible is key to enhancing their experience.

the hassle-free
parking experience

with care by APT SKIDATA you have the healthcare parking solution that will streamline operational efficiency and enhance staff, patient & visitor parking.

embrace the ecosystem

care isn't just a product, or even a group of products. It is an entire ecosystem based around our core parking solution. It offers healthcare providers a flexible solution, built for you now and capable of growing as you grow.

"a community of cooperating solutions"

Starting with the foundation of every car park – our core solution is the simplest form of car park – gates, barriers, pay machines. However in today's parking environment, this is often just the beginning.

Add to this an integrated management solution and comprehensive reporting package and you can easily deploy a cost effective enterprise parking solution.

In order to ensure you have the solution that is easy to manage and easy to park, you can add these components:

reserve

Prebook a space, control staff permits and allow post exit payment ensuring simple parking and improving the parker journey.

verify

ANPR integrated into the core parking experience ensuring simple entry for all vehicles – staff, patients, visitors and emergency vehicles.

locate

From simple free spaces to in space notifications, locate ensures efficient parking, removing the stress of finding a space.

charge

Add EV charging to any location with fully integrated payment options.

what are the benefits?

The first benefit for the operator is **central management**. An integrated ecosystem will seamlessly work together in a single converged environment to give you one management layer so you have complete visibility of your estate.

Adding to the core management capabilities is **central reporting**. All of the solutions within care will give you and your business up to date information about your estate making sure you are totally briefed.

Every parking ecosystem needs support. Our **24x7 support** infrastructure gives you peace of mind to know we are there for you. Raise a support call with our team any time of the day and get an engineer onsite within 2 hours. You can even raise minor support cases online with our customer portal as well as seeing up to date information about everything we are doing onsite. Add this to our **digital.service** capability to remotely "dial in" to your system and via video stream actually see your site.

One of the main factors in a healthcare parking solution is the tariff management. care provides **simple tariff management** for all your tariffs - staff, patients, visitors, bluebadge and emergency vehicles. Tariffs can be set per group to ensure each parker is charged the correct amount, whichever car park they go to.

for the operator

Core to a healthcare parking solution is making it easy to park. This journey often starts before leaving the house. **Appointment parking** means that there is no need to stress about trying to find a parking space. Whether you are a patient or a visitor, you can prebook your space and be guided to that space using our **wayfinding** solution when you get to the car park.

Ensuring that there are **multiple payment options** for all parkers means that you are covered for prebooking, short term visitor permits for multiple visits as well as paying automatically with autopay or simply pay at the machine.

Every member of staff wants an easy journey to work. They also want an easy journey once they get into the carpark. No more hunting for a space worrying about being late for work. **Staff permits** gives any staff group a specific price and access to staff car parks, ensuring a quick and easy journey.

Adding **electric vehicle chargers** provides a valuable service for all visitors who drive EVs as well as improving air quality and reducing emissions near sensitive communities. It will also add a "green" dimension to the overall perception of the healthcare environment.
